Overview

We are creating our own organization focused on **Greening Public Spaces for Sustainable Communities**. This organization is dedicated to protecting the ozone layer and promoting sustainable habits in public spaces by addressing pollution sources like plastic waste and smoking-related litter. Through awareness and community involvement, the organization supports Sustainable Development Goal **(SDG) 11: Sustainable Cities and Communities**, aiming to make urban spaces cleaner, healthier, and more sustainable.

The current system and its problems

The existing system of public place management and sustainability promotion encounters numerous issues especially in the management of plastic waste, littering caused by smoking and maintaining ozone layer. These challenges include the following:

1. **Management of plastic litter**
2. **Smoking-related Litter**
3. **maintaining ozone layer**

project Scope

The Greening Public Spaces for Sustainable Communities project will develop a database system that integrates user engagement, comment, events, and educational posts. This structure encourages the community to discuss and appreciate environmental protection efforts, promoting positive action for a greener, healthier public space.

The *Greening Public Spaces for Sustainable Communities* project is directly aligned with Sustainable Development Goal (SDG) 11: Sustainable Cities and Communities. This goal focuses on making cities inclusive, safe, resilient, and sustainable by improving urban spaces, promoting environmental responsibility, and enhancing public health and community well-being.

By aligning with SDG 11, this project not only promotes environmental sustainability but also encourages community-driven initiatives that contribute to the well-being and resilience of urban spaces.

Modules

1. User Module

- **Purpose:** Manages user accounts and roles, allowing participation in events, commenting on posts, and engaging with community content.
- **Member :** ABDELRAHMAN HAMDY FERGANY ALY

2. Posts Module

- **Purpose:** Shares information on topics such as ozone protection, pollution reduction, and eco-friendly habits. Users can read posts and leave comments.
- **Member :** ABDULLAH ABDULRAHMAN

3. Comment Module

- **Purpose:** Allows users to comment on posts, creating discussions and spreading awareness about the benefits of environmental action.
- **Member :** LI BINGYE

4. Event Module

- **Purpose:** Manages community events, such as clean-up drives or workshops, to encourage sustainable behaviors.
- **Member :** AHMED H.M. TAHA
